

# Particle Filter using Players Feature based Multi-Likelihood and 3D Elimination of Other Players for 3D Multiple Players Tracking in Volleyball

修士課程卒業 庄系舟

## Research background

### 3D Multiple Players Tracking

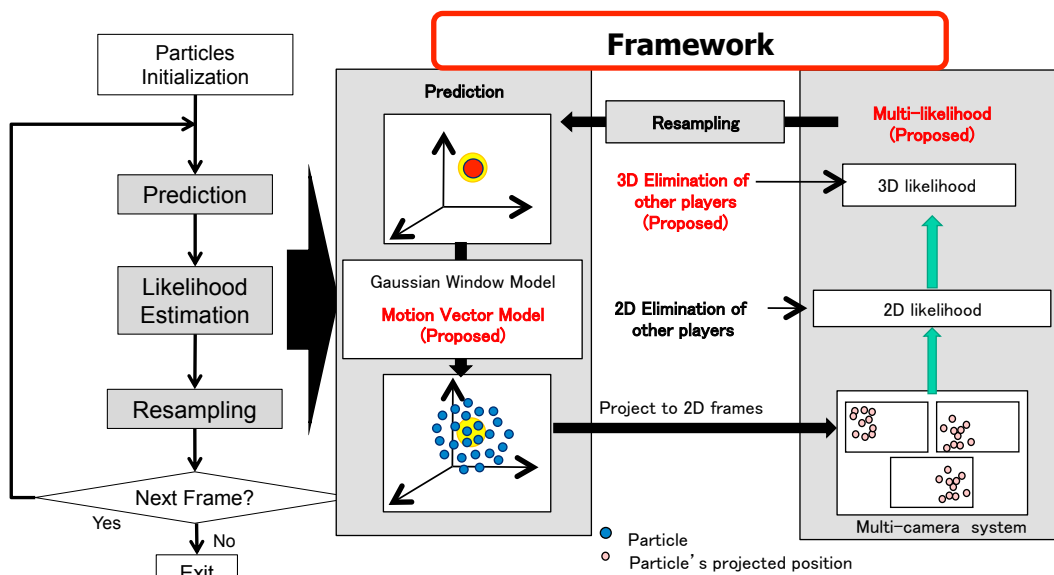

## Problems and Solutions of Players Tracking

	Problems	Solutions
Size	Big	Particle Filter
Rigid or not	Non-rigid	
Speed	Slow	
Movement	Irregular	
Main disturbance	Occluded by other targets with similar features	Players Feature based Multi-Likelihood and 3D Elimination of Other Players
Target	Multiple	

## Research Target

Improve the accuracy of 3D players tracking algorithm.

## Proposed method

## Multi-Likelihood Model

## Number Detection Likelihood Model

## Motion Vector Prediction Model

## 3D Elimination of Other Players

## Experiment result:

## Success Rate Comparison in the First Set

Round	RU per Round	Proposal	Conventional work	Round	RU per Round	Proposal	Conventional work
1	18	16	12	19	6	6	5
2	12	12	8	20	6	6	5
3	6	6	4	21	6	6	6
4	6	6	2	22	12	11	10
5	6	6	6	23	6	6	6
6	12	10	10	24	6	6	4
7	6	6	6	25	12	12	7
8	24	23	23	26	42	39	39
9	18	18	16	27	6	5	5
10	12	11	12	28	12	12	11
11	6	6	5	29	6	6	4
12	6	6	6	30	6	6	6
13	18	18	15	31	6	6	6
14	12	10	9	32	6	6	5
15	18	18	18	33	6	5	5
16	6	5	5	Total	348	334	294
17	12	12	8	Success_Rate	96.0%	84.5%	
18	6	6	5				

## Overall Success Rate

	Proposal	Conventional work
First Set	96.0%	84.5%
Third Set	97.6%	88.6%
Execution time	24s/f	8s/f
Total	96.8%	86.6%

## Conclusion:

With the proposed particle filter based 3D multiple players tracking algorithm, averagely 96.0% and 97.6% success rate can be achieved in the first set and the third set.
